

Friday 31st January

Geography WALT: Identify locations in Egypt.

WILF: [G] TL: []

Thursday 5th December

Geography WALT: Identify the biomes that exist on earth.

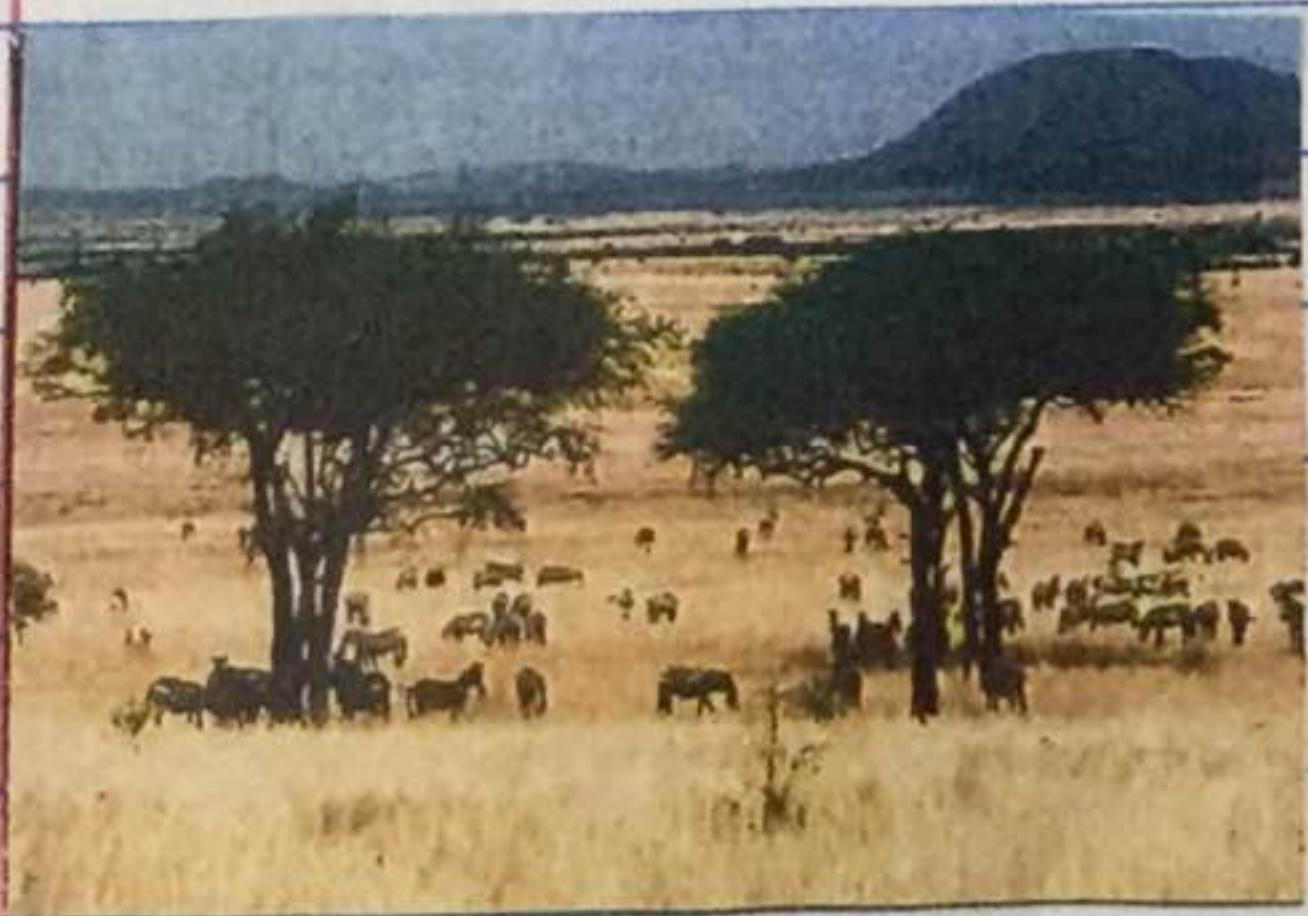

WILF: [G]

TL: 

Rainforests are located around the equator, rainforests are a riot of life, with lush emerald plants growing all year-round. The hot climate means that it gets drenched as much as 180 inches for rain daily.

The desert is one of the driest biomes. Some deserts (such as the Sahara) get less than an inch of fresh water an entire year. Desert animals also deal with high temperatures and less water.

Tropical savannas are vast grasslands dotted with trees that spread across Africa, Australia, America and India. With wide open space and so much grass to graze on, savannas are home to plant-eating animals.
